Edition Benefits

SAP S/4HANA Cloud Private Edition is an intelligent ERP suite that comprises digitally enabled processes for increased efficiency, predictive and simulation capabilities for improved decision-making, and intelligent automation that provides the resiliency and agility required of an intelligent enterprise. It provides the latest innovations and cloud value for you while allowing you to retain your investments by converting your existing systems.

SAP S/4HANA Cloud Private Edition brings to you the following main benefits:

Offering Comparison

SAP S/4HANA Cloud Public Edition, SAP S/4HANA Cloud Private Edition, and SAP S/4HANA come with their own characteristics and serve different purposes.

Summary

SAP S/4HANA Cloud Public Edition

SAP S/4HANA Cloud Public Edition is our public cloud offering where we take care of the system operation and maintenance for you. You don't have to invest in any hardware and can immediately benefit from our latest innovations released each month with minimal disruption to your business. SAP S/4HANA Cloud Public Edition comes with a smaller but ever-increasing functional scope as compared to SAP S/4HANA.

SAP S/4HANA Cloud Private Edition

SAP S/4HANA Cloud Private Edition enables a cloud experience with a functional scope and upgrade flexibility comparable to SAP S/4HANA. We release a new version of the software every two years and provide seven years of maintenance for this release. We

also plan to deliver feature packs every six months in the first two years of a release. When you decide to install a new release or a feature pack, we'll do it for you, so there's little effort required from your end. We encourage you to stay current to take advantage of our latest innovations as we deliver them.

SAP S/4HANA

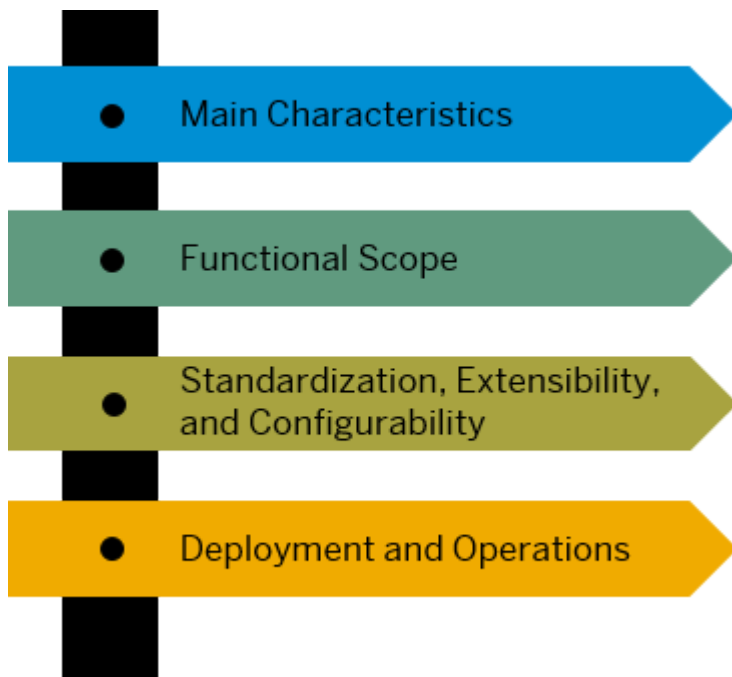

SAP S/4HANA is our on-premise offering that represents a next generation of business applications designed to help you run simple in the digital economy. You install the software locally on your machines. The release cycles for new software versions and feature packs are parallel to those for SAP S/4HANA Cloud Private Edition, and similarly, you also decide whether and when to upgrade. The main difference, though, is that you instead of SAP take care of the software and the hardware updates for your system. SAP provides maintenance for the software.

Offering Comparison

Read on to find out more about the differences among the three offerings:

As the graphic shows, SAP ABAP Platform connects SAP S/4HANA to the SAP HANA database. The platform is the foundation of SAP S/4HANA that builds on top of the database and serves as the data management platform for SAP HANA. It connects the following components of an SAP S/4HANA system to the SAP HANA database:

Component	Description
SAP S/4HANA Enterprise Management	Designed for enterprises across industries that need a deep and broad level of functionality combined with a high degree of flexibility in customization. It is included in the SAP S/4HANA license.
SAP S/4HANA Enhanced LoB Functions	Enhance core functions of SAP S/4HANA Enterprise Management to provide additional business benefits for your line of business (LoB). Please note that you might need a separate license.
SAP S/4HANA Industry-Specific LoB Functions	Enhance core functions of SAP S/4HANA Enterprise Management to provide industry-specific business benefits for your line of business (LoB). Please note that you might need a separate license.
SAP S/4HANA Compatibility Packs	Include certain classic SAP ERP solutions with limited use rights that you can run on your SAP S/4HANA installation. For more information, see SAP Note 2269324 – Compatibility Scope Matrix for SAP S/4HANA.
SAP Add-Ons	For example, SAP S/4HANA for central procurement and SAP Global Trade Services.
Non-SAP Add-Ons	Functional extensions provided by SAP partners or other suppliers.

Component	Description
Integration with Other SAP Solutions	For example, SAP Ariba and SAP SuccessFactors.

SAP S/4HANA Cloud Private Edition includes all the components of SAP S/4HANA and makes use of the following additional components:

Component	Description
Load Balancing	A process that distributes server requests across any number of application servers. The distribution is performed by the SAP Message Server when the user logs on.
Cloud Connector	A tool that connects SAP S/4HANA Cloud Private Edition to applications including Adobe Document Services (ADS) that run on SAP Business Technology Platform (SAP BTP).
SAP Web Dispatcher	A tool that provides an external connection to the Internet for SAP S/4HANA Cloud Private Edition. It can reject or accept connections and balances the load to ensure an even distribution across the servers.

Transition Paths

Ready to find out how to transition to SAP S/4HANA Cloud Private Edition?

Summary

Depending on which system you’re currently running, the transition paths are different:

- If you’re currently running SAP S/4HANA, switching to SAP S/4HANA Cloud Private Edition requires just a lift and shift. You’ll be able to work in the system just like before. No re-training required.
- If you’re running an SAP ERP 6.0 installation on any enhancement package (EhP), we’ll work with you to provide a tailored-to-fit transition experience. The implementation effort required will be about the same as transitioning to SAP S/4HANA.
- If you’re running an earlier version of SAP ERP, SAP R/3 Enterprise, or even a third-party system, the most straightforward approach is to implement a new system that runs on SAP S/4HANA Cloud Private Edition.

There'll be a contract change as you switch from a maintenance-based license to a subscription-based one.

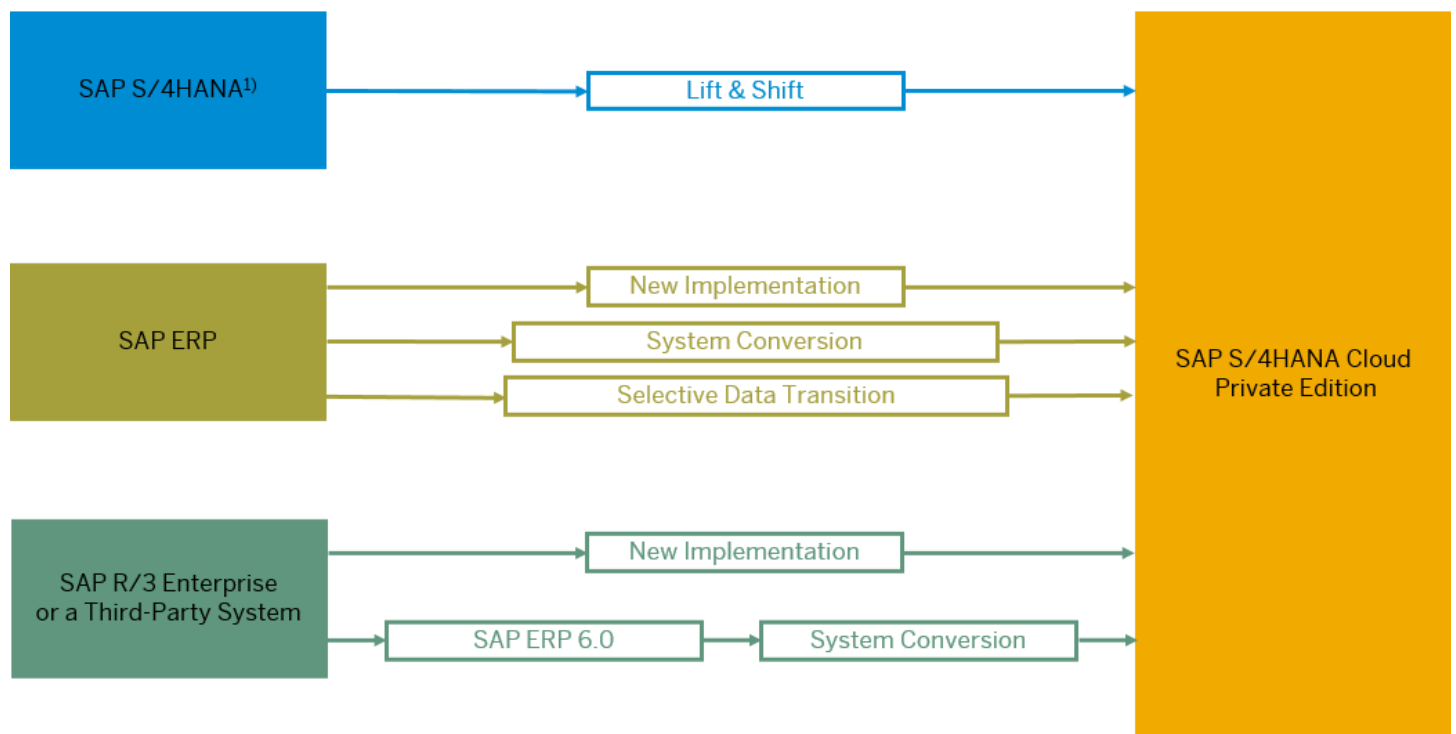

Transition Paths

Here're more details about how you can make the transition.

¹⁾ Requires at least nine months of mainstream maintenance remaining.

Please note that image maps are not interactive in PDF outputs.

As the graphic shows, the transition paths to SAP S/4HANA Cloud Private Edition for the various source systems are as follows:

Source System	Transition Paths	Target System
SAP S/4HANA	Lift & shift Requires at least nine months of mainstream maintenance remaining.	SAP S/4HANA Cloud Private Edition
SAP ERP 6.0 on Any Database	• New implementation • System conversion with a system move into data center environment of SAP S/4HANA Cloud Private Edition, either in one step or in separate steps • Selective data transition	
SAP R/3 Enterprise or a Third-Party System	• New implementation • Upgrade to SAP ERP 6.0 and then system conversion	

Transition Options

The following table explains the transition options:

Transition Option	Description
Lift & Shift	You migrate your SAP system from your data center to an SAP data center or that of an infrastructure-as-a-service (IaaS) provider. This

Transition Option	Description
	marks a transition to the operation environment for SAP S/4HANA Cloud Private Edition. Your SAP system is moved as is and there are no changes to the software or the release version. For example, if you're currently running SAP S/4HANA 2022, the version will still be 2022 after you transition to SAP S/4HANA Cloud Private Edition.
System Conversion	This is commonly known as the brownfield approach where you convert your existing SAP ERP system to SAP S/4HANA Cloud Private Edition. This system conversion also includes a migration of your SAP system from your own data center to either a data center of SAP or a data center of an infrastructure-as-a-service (IaaS) provider. This migration can be a separate technical step or can be combined with the system conversion procedure. The system conversion will be accomplished using the SAP Software Update Manager (SUM) in a one-step procedure with a single downtime for adopting the following changes: • Optionally includes the migration of your source system from your data center to a data center of SAP or of an infrastructure-as-a-service (IaaS) provider. • Migration of any database for SAP ERP to the SAP S/4HANA database • Conversion of the data model for SAP ERP to that for SAP S/4HANA • A software upgrade where the application code for SAP ERP is replaced with that for SAP S/4HANA Cloud Private Edition
New Implementation	This is commonly known as the greenfield approach where you transition to a new, clean system for SAP S/4HANA Cloud Private Edition. You either move straight to the new system—known as the “Big Bang” transition—or migrate individual business units sequentially—known as a phased rollout.
Selective Data Transition	You selectively migrate and transform configuration, master, and transactional data to meet your specific requirements. This also includes a migration of your SAP system from your own data center to either a data center of SAP or a data center of an infrastructure-as-a-service (IaaS) provider. Typically, this approach is delivered as a consulting or service offering.

Help Me Decide

The following table should help you decide when to choose system conversion and when to choose new implementation or selective data transition:

Criteria to Consider	System Conversion	Selective Data Transition	New Implementation
Future Readiness	System meets requirements for master data and organizational	Redesign of master data and organizational structures required	

Criteria to Consider	System Conversion	Selective Data Transition	New Implementation
	structures		
Perception of Current System	Supports strategy	Does not support strategy and is an innovation blocker	
Data Quality	Good	Bad	
Data and Regulatory Compliance	Compliance unchanged	Possibility to resolve compliance issues	Starting new and compliant
Historical Data	All historical data kept	Selectively keep and harmonize historical data	No historical transactional data kept
Custom Code	Well maintained	Well maintained or outdated	Outdated
Release Level	On or above SAP ERP 6.0		Current release not relevant
Transition speed	Highest with mainly technical shift	Fast time to value with selective innovation	Highest with fit-to-standard
System Consolidation	No	With tool support	With limited tool support
Phased Go Live	No	Yes	

More Information

For more information about the transition options, the available tools for transition, and which transition path is the right one for you, see [Mapping Your Journey to SAP S/4HANA – A Practical Guide for Senior IT Leadership](#) .

FAQ

Am I eligible for switching to SAP S/4HANA Cloud Private Edition?

We support transitioning from different source systems including SAP S/4HANA, SAP ERP, SAP R/3 Enterprise, and even third-party systems. The transition paths will be different. For more information, see [Transition Paths](#).

Is the transition to SAP S/4HANA Cloud Private Edition the same as that to SAP S/4HANA?

No, transitioning to the private edition is specific for each customer and requires specific knowledge. We recommend that you select a partner who has the knowledge and the experience to help you perform the transition, for example system conversion. You can search for your preferred and qualified partner using the [SAP Partner Finder](#).

What are the brownfield approach and the greenfield approach?

The brownfield approach means you convert your existing SAP ERP system to SAP S/4HANA Cloud Private Edition. With the greenfield approach, you no longer use your old system and instead start with a new, clean one for SAP S/4HANA Cloud Private Edition.

Who'll take care of the system maintenance if I choose to adopt SAP S/4HANA Cloud Private Edition?

To transition to SAP S/4HANA Cloud Private Edition, you'll need to migrate your data center to SAP or that of an infrastructure-as-a-service (IaaS) provider. SAP will then take care of most of the system maintenance and the technical operation tasks. For more information about the relevant services provided by SAP, see [RISE with SAP S/4HANA Cloud, private edition and SAP ERP, PCE Roles and Responsibilities](#).

Where are the data centers located? Can I pick which one to use?

Yes, you can have the data center location of your choice. SAP has data centers for you to choose from. We're also working with all major IaaS providers who have data centers on all continents. If you already have a subscription to such a provider for running other parts of your business, most likely you can use the same data center from the same provider to run SAP S/4HANA Cloud Private Edition.

I have add-ons to SAP S/4HANA and integrations with third-party software. Will they still work after I switch to SAP S/4HANA Cloud Private Edition?

Yes, almost any software that currently works with SAP S/4HANA will continue to work with SAP S/4HANA Cloud Private Edition. Although we recommend a clean core approach, you can still use the capabilities of the ABAP design time to create custom extensions to SAP functionality. For more information, see [ABAP Extensibility Strategy](#) and [Extend SAP S/4HANA in the cloud and on premise with ABAP based extensions](#).

What is RISE with SAP and what does it have to do with SAP S/4HANA Cloud Private Edition?

RISE with SAP is a flexible solution designed to support your business needs in your industry. SAP helps you fulfill regulatory requirements and provides the cloud operations and technical support. RISE with SAP S/4HANA Cloud Private Edition is a variant of the RISE with SAP offering.
