

Approach & Objective

- **Objective:** Confirm approach to facilitate business process workshop which includes the presentation and design of AI/Agentic/Automation solutions
- **Approach:**
 - Confirm process to review and present Agents within process (Steps 5-7 of next slide)
 - Identify the Agents which are available (standard SAP) – focus on the 8 agents in receivable management
 - Confirm / Calculate the value proposition from SAP based on RL information (consider double counting)
 - Identify the impacted L4 & related L5 activities
 - Overlay the Agents to the L5 activities
 - Determine & document if the L5 activities would be modified based on the agents
 - Determine & document the impact to the persona / roles based on how the agent impacts these L5 activities
 - Determine any other impacts to 1) process 2) data 3) people 4) technology 5) value to enable the agents
 - Identify any recommended improvements to agents / new agents
 - Develop Point of view on “is implementing the agents the right answer for RL” (KDD assigned to Level 3)

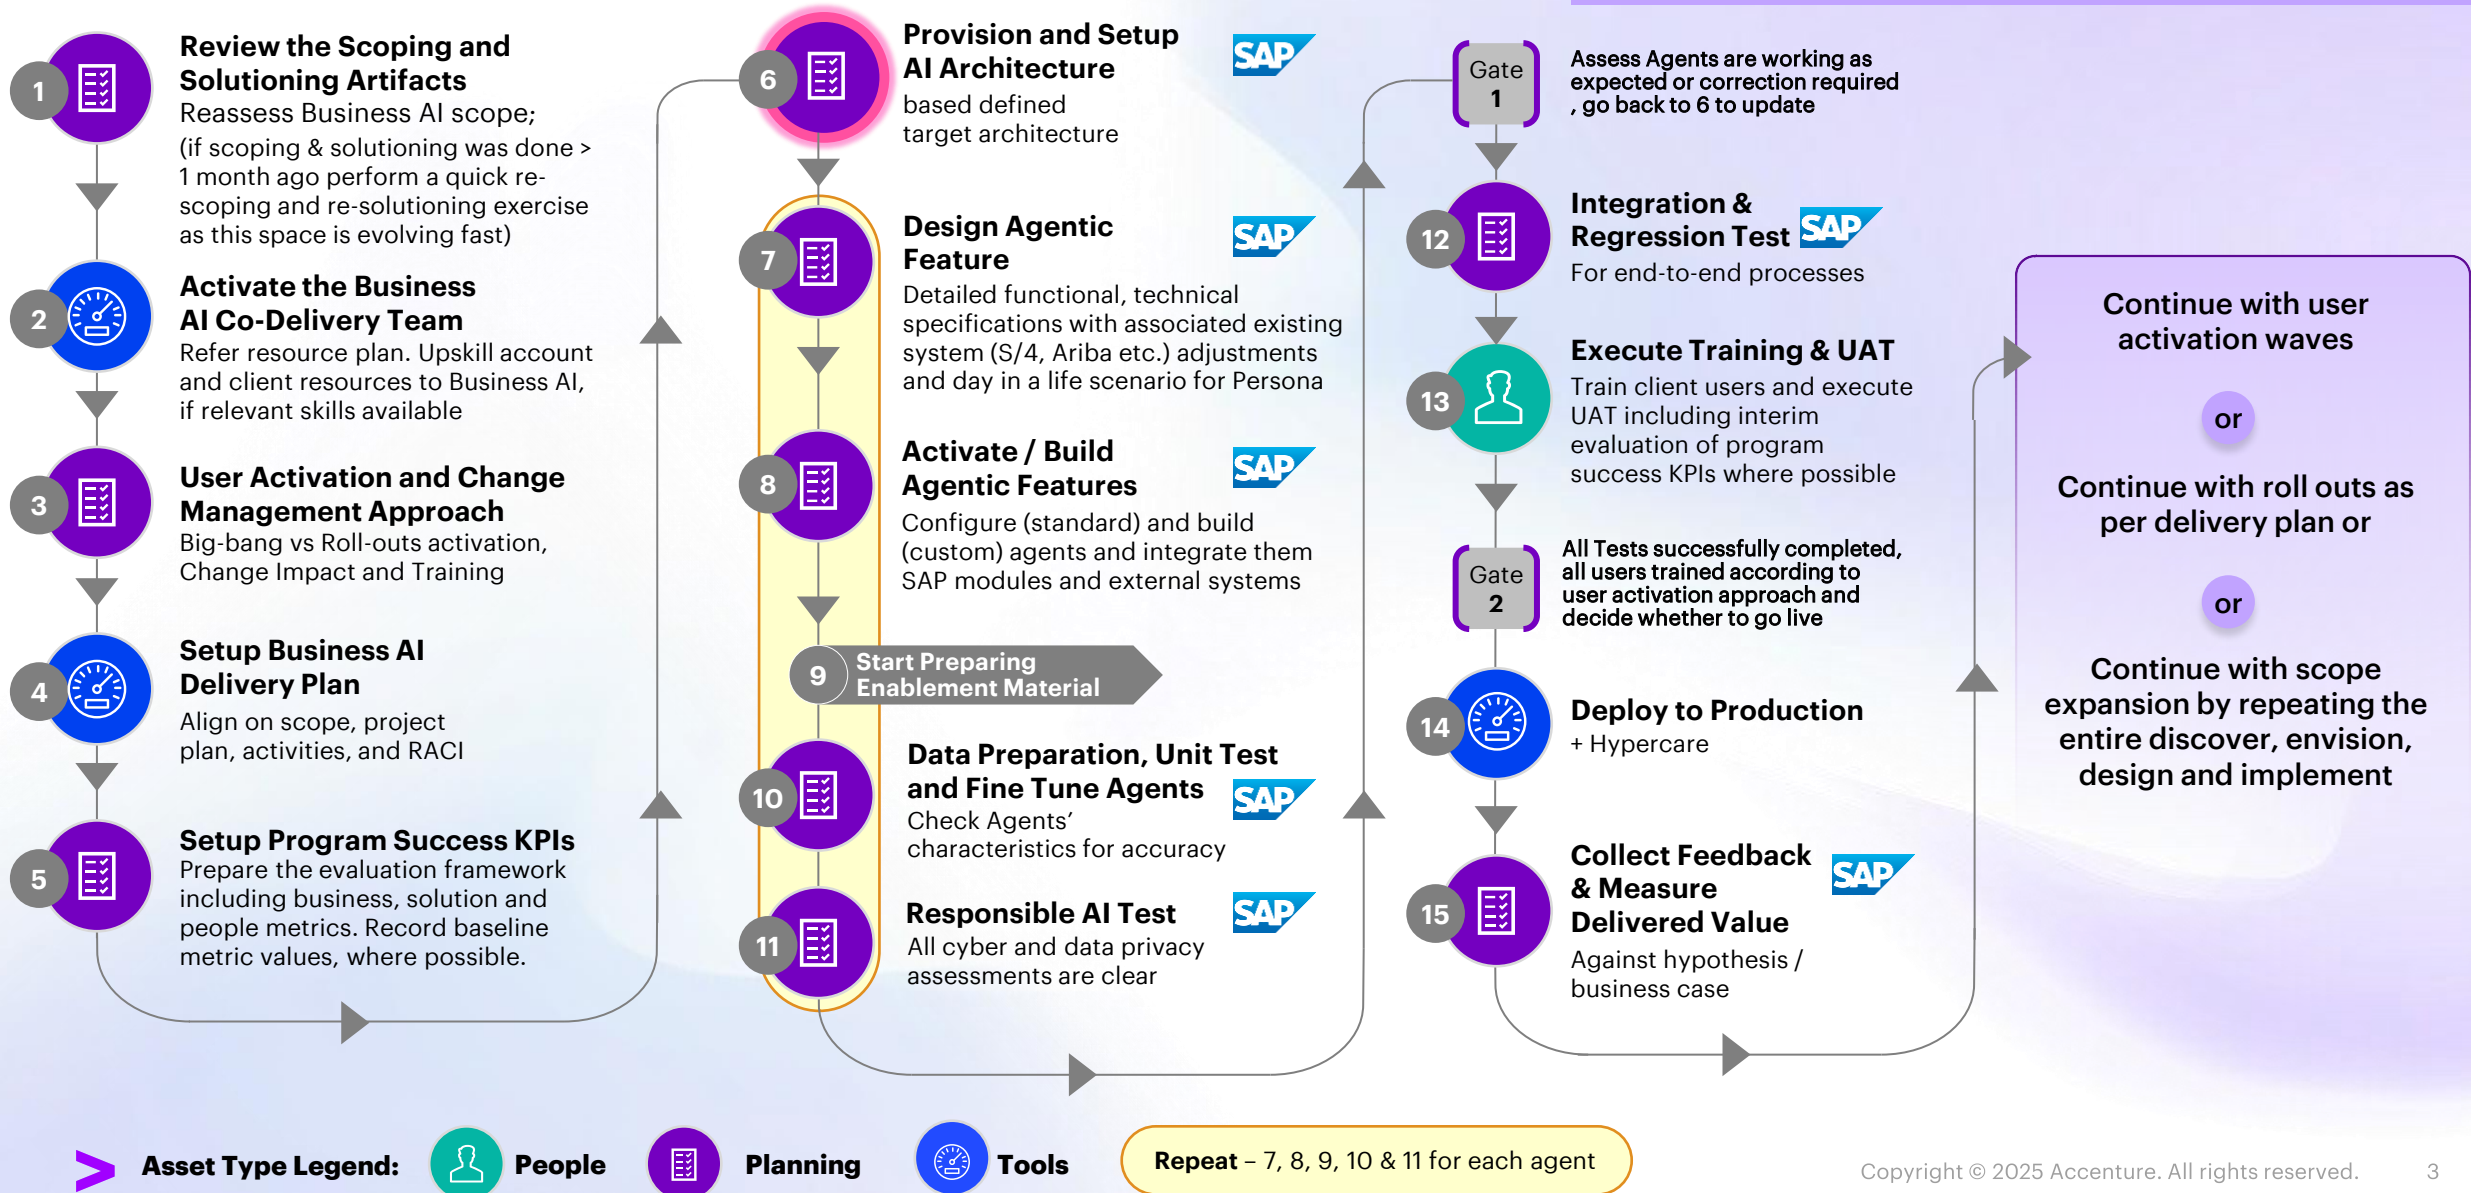

The Journey to **Scope Business AI**

Confirm the 'steps' that are required to design solution; provide input for what information or details are needed for each step

The Journey to **Deliver Business AI** for Inf

Confirm what would be required for each step (pre-requisites, technologies, functional and data dependencies, documentation templates, etc)

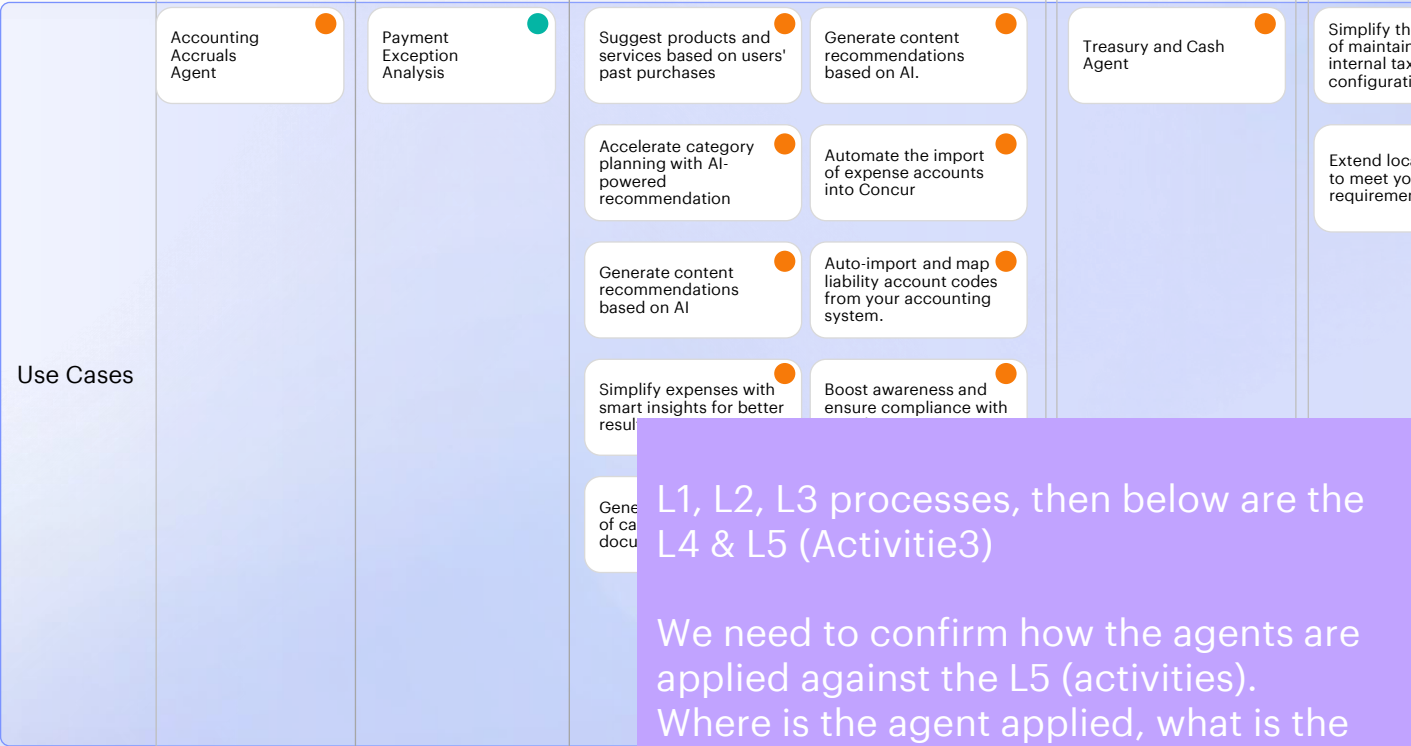

Available & pending AI solutions and agents for Receivable Management

Copyright © 2025 Accenture. All rights reserved. 4

Focus on Receivables Management – how do the agents apply to the L4/L5 business processes & activities & then how does the process change / how do the personas / people change?

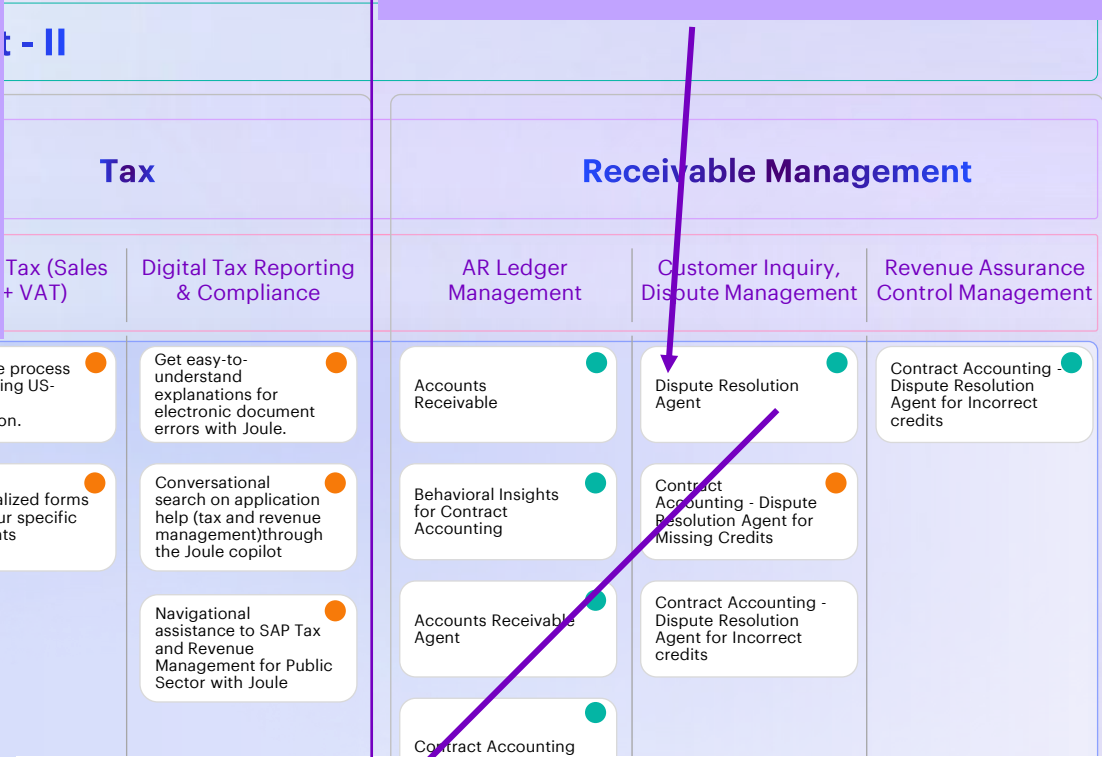

- 1. What is the definition of the agents?
- 2. What are the agents intended to do / work they would perform
- 3. Where in the process flow (steps) would the agent apply?
- 4. Does the process flow change based on the introduction of the Agent?
- 5. What is the impact to the persona (roles) that execute the process?
- 6. What steps change from manual (human-driven) to partially automated (human-assisted) or fully automated (AI-driven)

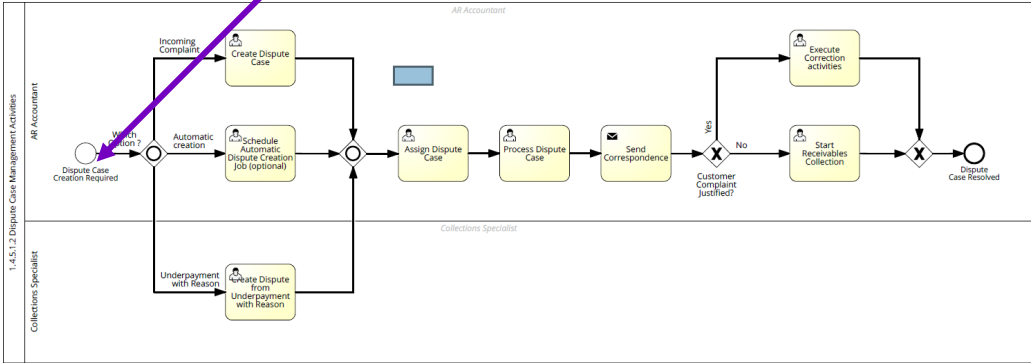

L1, L2, L3 processes, then below are the L4 & L5 (Activities)

We need to confirm how the agents are applied against the L5 (activities). Where is the agent applied, what is the impact to the activities and the personas / roles

NOTE: THESE ARE AGENTS....NOT L4 PROCESS

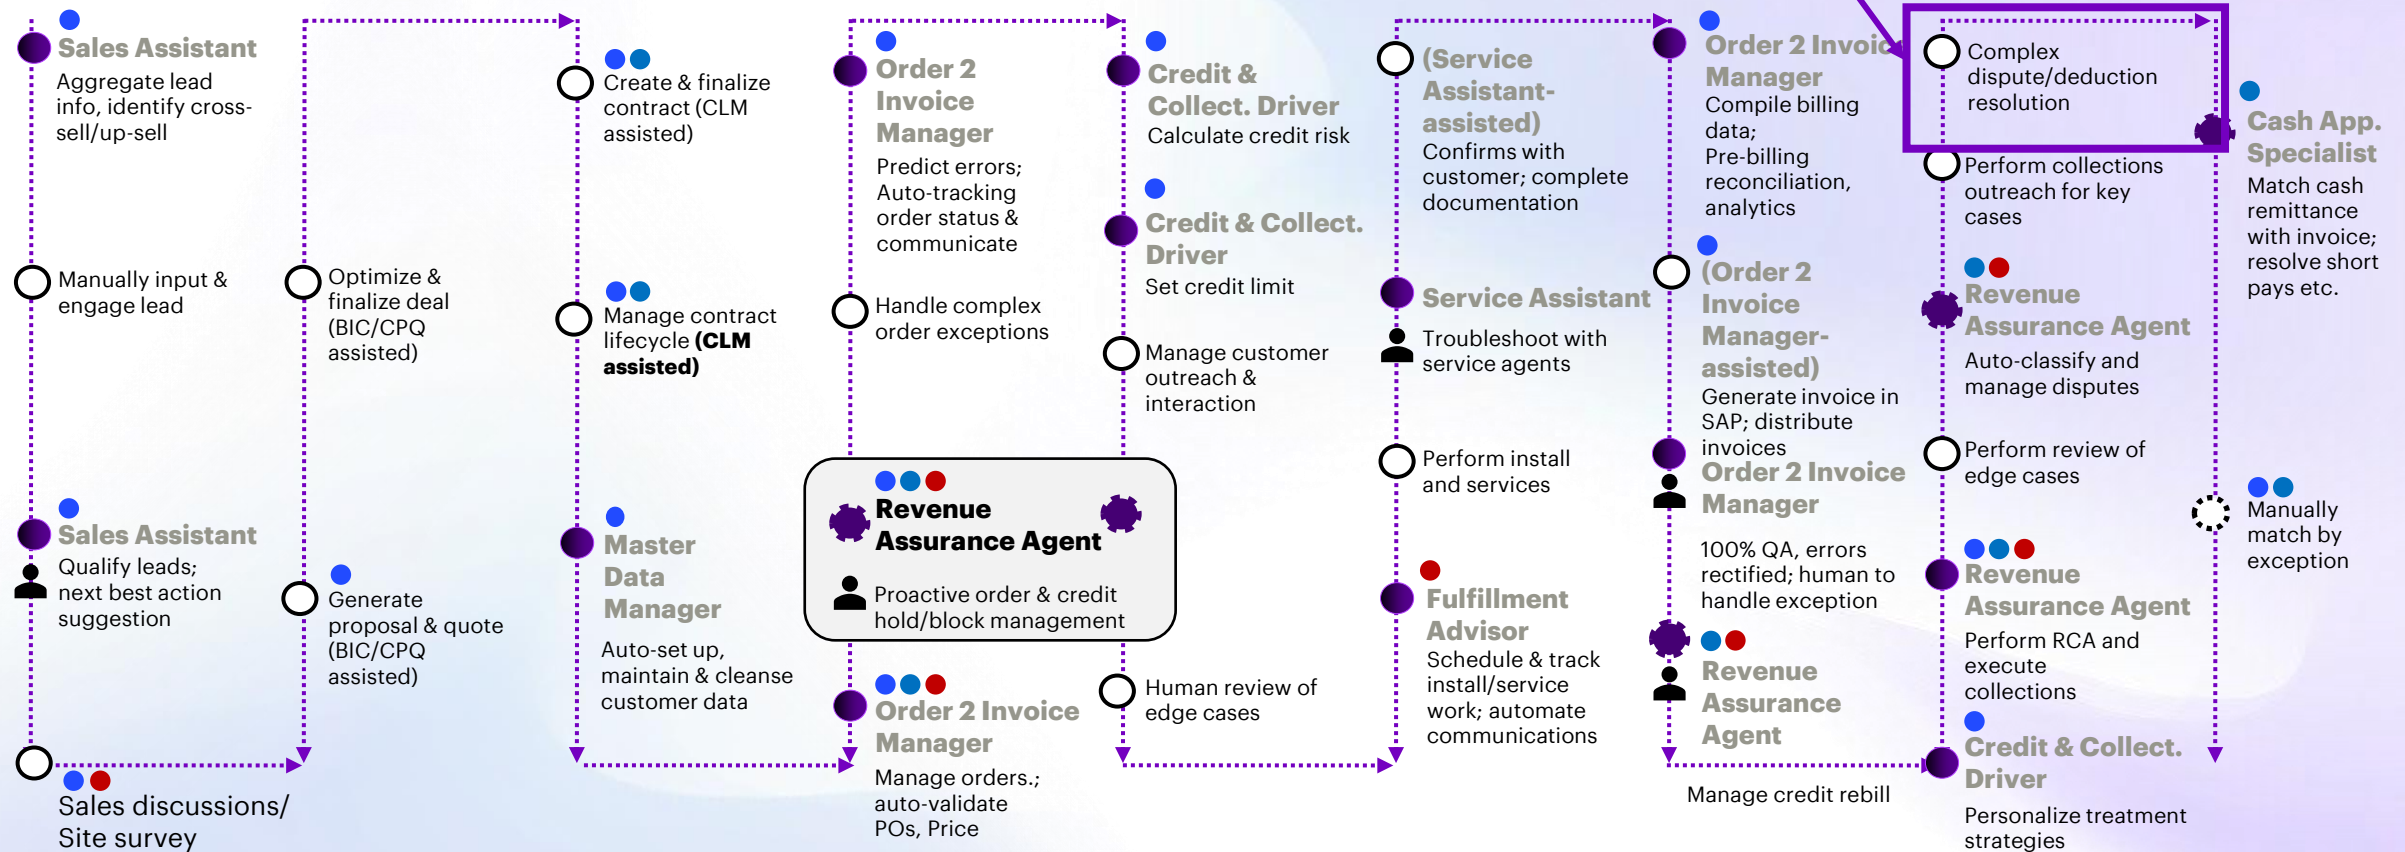

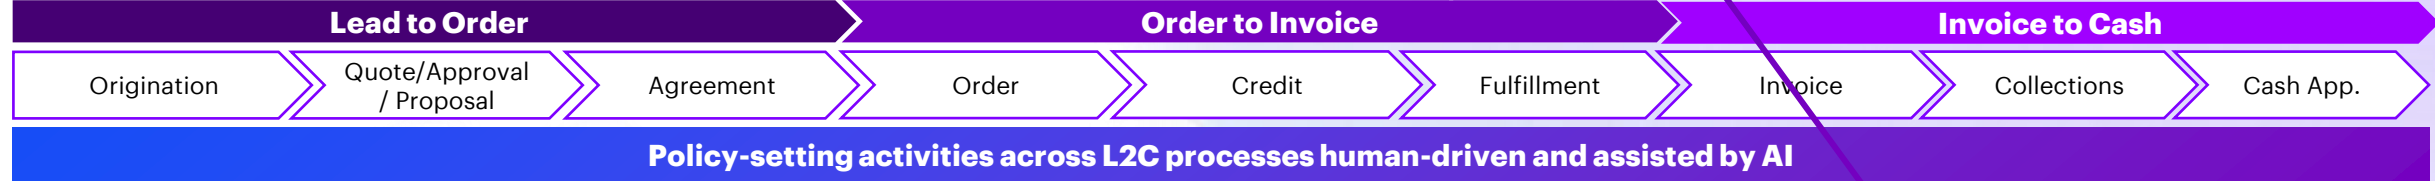

1.4.5.1.2 Dispute Case Management Activities

Example O2C Work Reinvention

Confirm if the updated L5 changes the type of process:
 Human-Driven (primarily driven by manual processes)
 Human-Assisted (significant mix of manual & AI automated steps)
 AI-Driven process (primarily AI driven steps)

Getting Started

SAP's Dispute Resolution Agent

SAP Discovery Center AI Feature - Dispute Resolution Agent

SAP's High-Level feature details for AI Dispute Resolution. Review for each identified AI feature highlighted previously within Receivables management capability

Dispute Resolution Agent

Automates the process of resolving disputes about incorrect invoices.

AI Agent Featured Beta

Overview

Contract Accountants want to efficiently resolve dispute cases such as incorrect invoices or missing payments so they can ensure timely collections and foster strong customer relationships. The Dispute Resolution Agent automates the process of identifying and resolving disputes caused by incorrect invoices. By efficiently analyzing both invoice details and contractual terms, the agent quickly uncovers discrepancies, errors, or mismatches. It then proactively suggests the contract accountants how to proceed (e.g. with the creation of a Credit Memo to resolve the conflict and ensure financial accuracy).

Benefits

- + Scan invoices and contracts for errors automatically
- + Detect incorrect charges and suggest fixes like creation of Credit Memos
- + Build trust and improve vendor relationships with faster dispute resolution

Interactive Value Journey

Clickable journey, step-by-step process for using the feature with claimed process, benefits, and clickable screens to understand usage

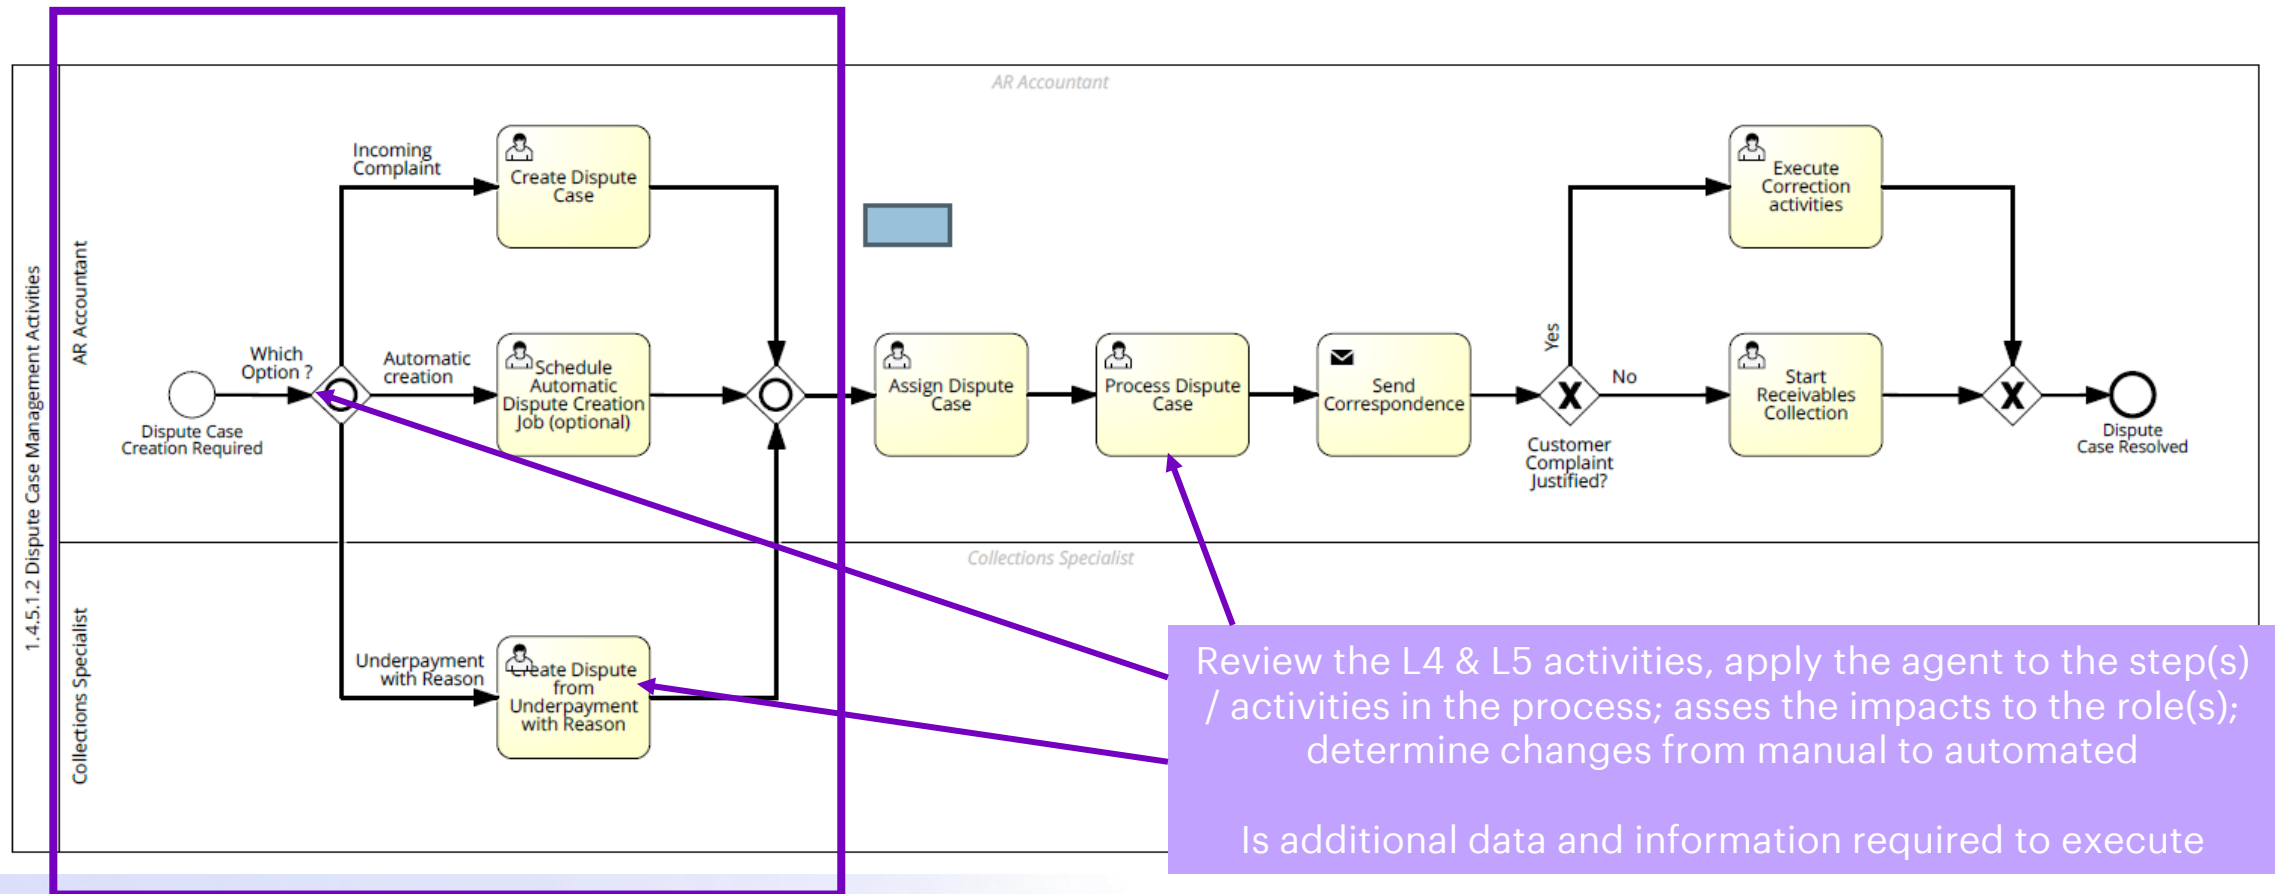

High-level video of feature

Today's Standard SAP Signavio Process Flow

1.4.5.1.2 represents an L5 Business Process that gives detailed steps of a standard SAP process. SAP does not indicate where this process can be enhanced with AI

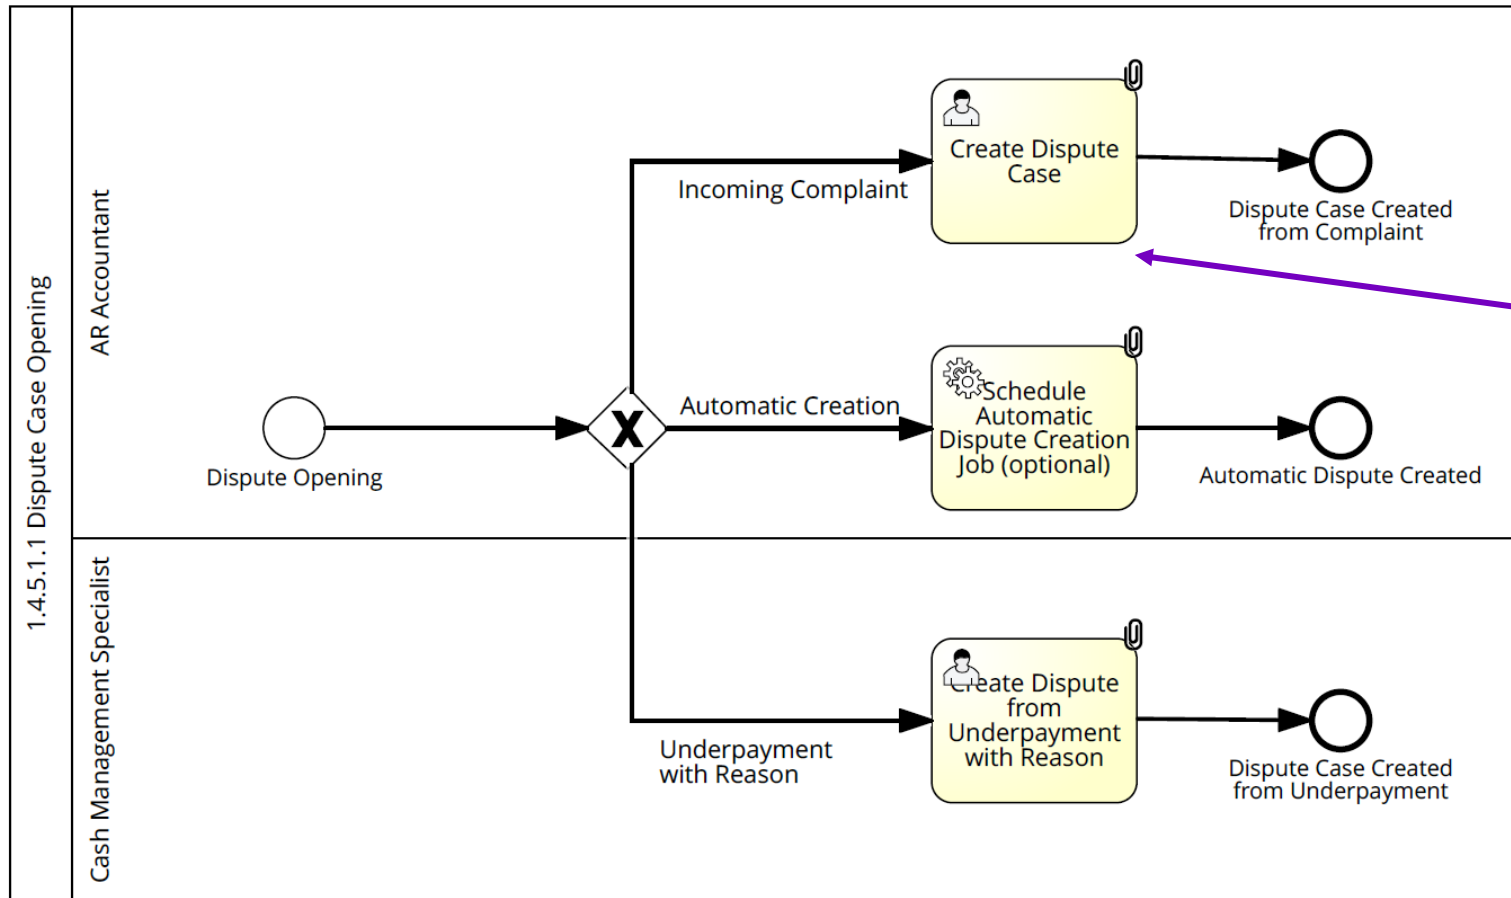

Objective: Determine how the agent is managed and/or interacts with the process and AR Accountant role to modernize the process flow

1.4.5.1.2 Dispute Case Management Activities

Today's Standard SAP Signavio Process Flow

1.4.5.1.1 represents an L5 Business Process that gives detailed steps of a standard SAP process. SAP does not indicate where this process can be enhanced with AI

Review the L4 & L5 activities, apply the agent to the step(s) / activities in the process; assess the impacts to the role(s); determine changes from manual to automated

Is additional data and information required to execute

Example – Business AI Persona Impact

Chief Financial Officer
Natalie

Need summary to the impact to each role / persona
(e.g. AR Accountant, Cash Mgmt Specialist)

Identify the benefits that apply
for each role and how the
process changes with and
without AI

Review the videos / interactive
value journey to understand the
change impacts to the role for
change from human driven to AI
driven process

Remediate errors impeding financial closing

SAP Advanced Financial Closing,
AI-assisted error resolution

Up to 90%

reduced effort to investigate
and remediate errors in
automated closing tasks.

Without AI

7%
of the unknown errors require
manual investigation and
remediation.

With AI

0.7%
of the unknown errors require
manual investigation and
remediation.

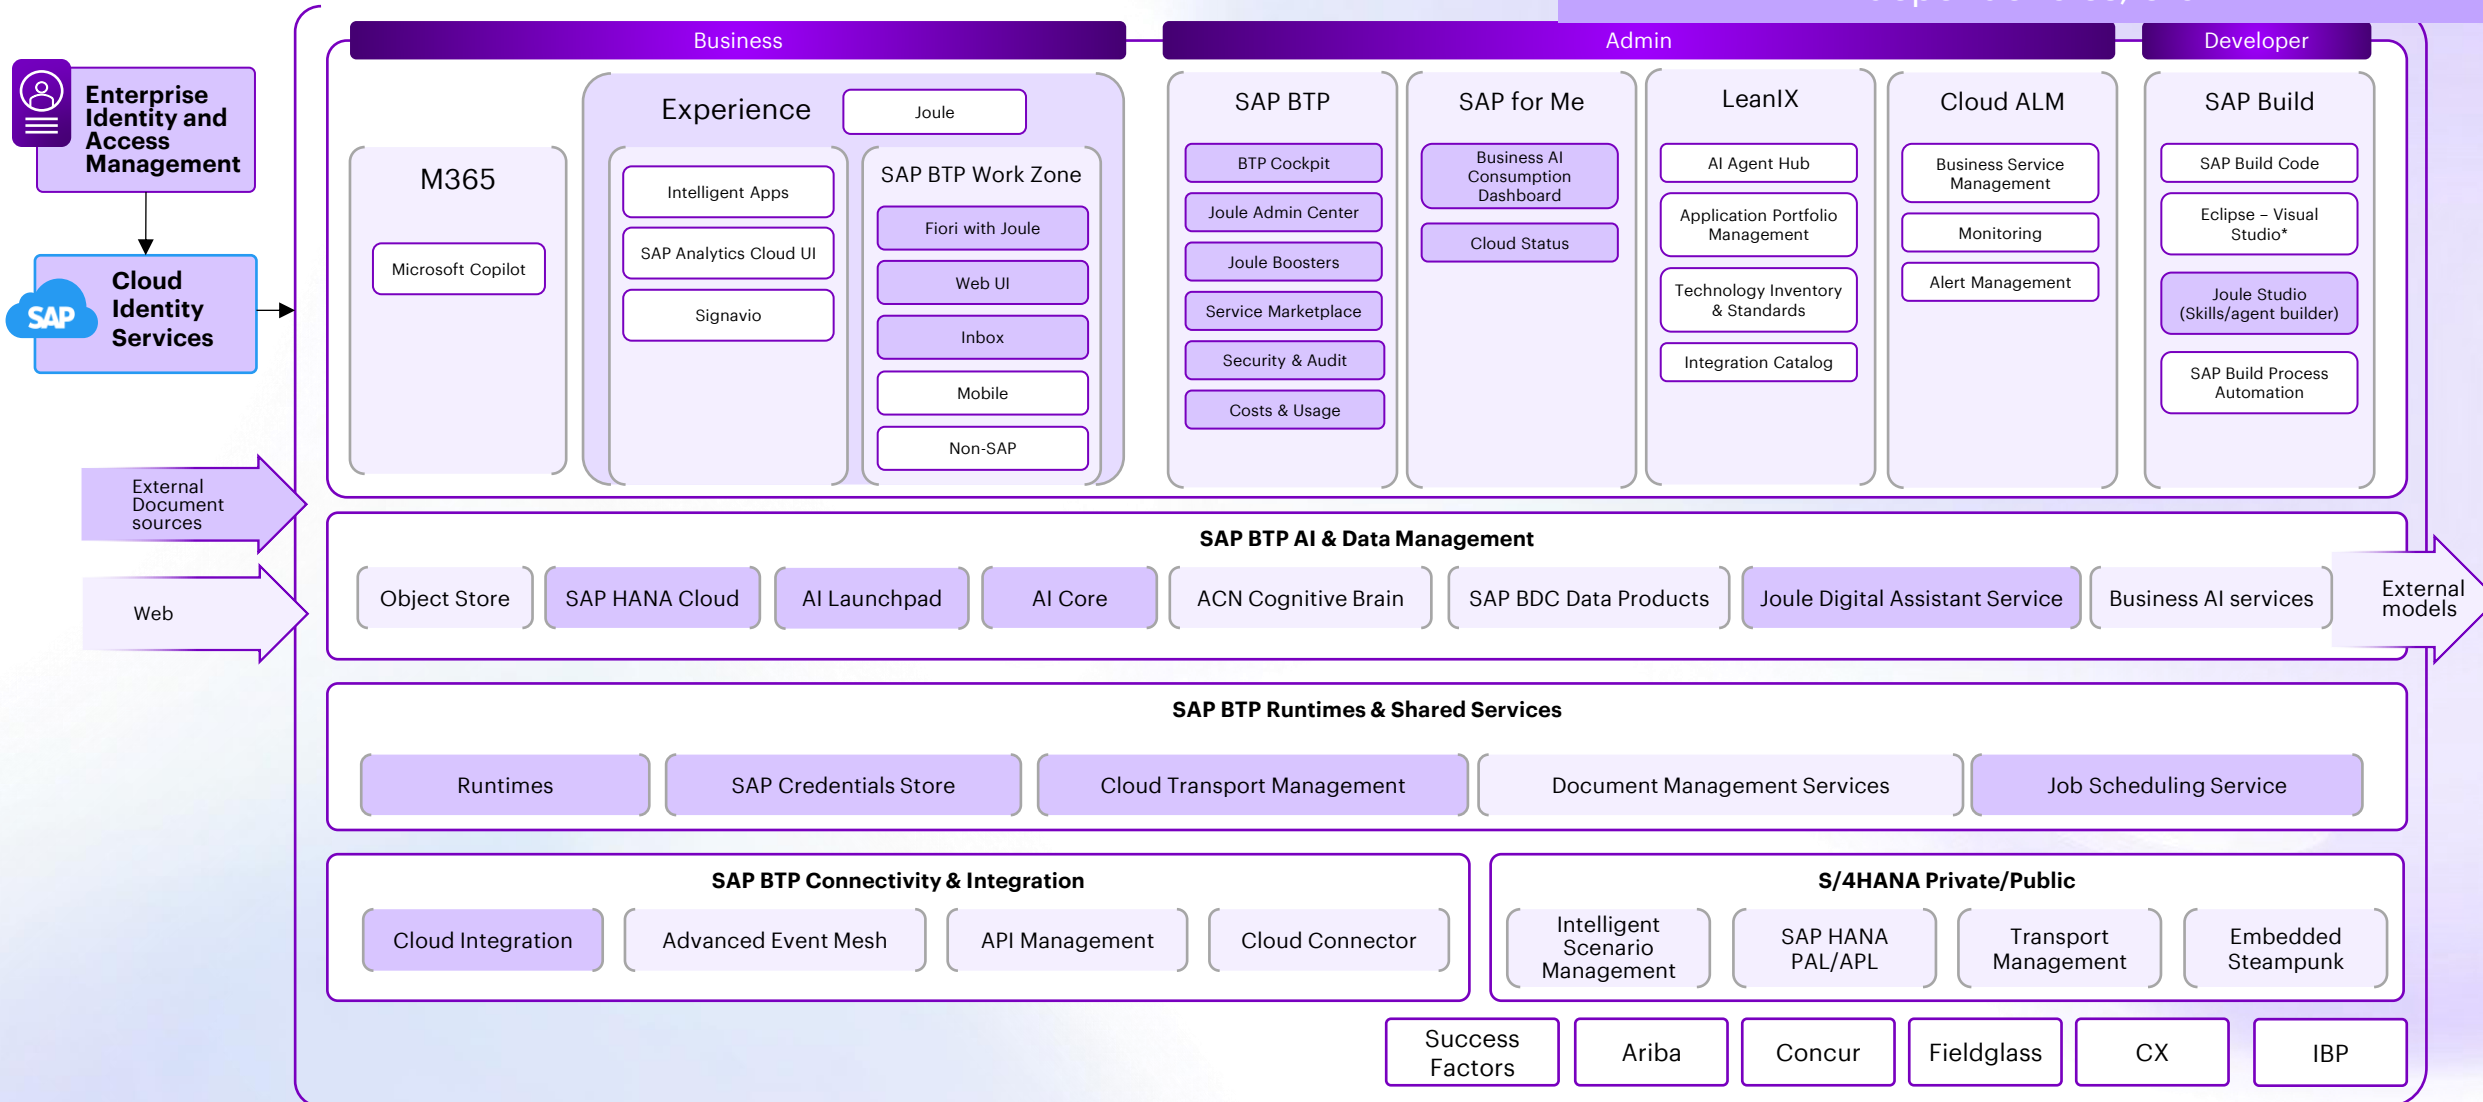

Created value

Annual benefits of
up to €2,885*

The screenshot displays the SAP Cloud Application Log interface for the task 'AFC_CLOUD_2024-2024003'. It shows a message from the 'Application Log' with a subject 'Cost Center OMB1/2 blocked against direct postings on March 31, 2024'. An 'Error Resolution Proposed by AI' pop-up window is overlaid, providing a detailed explanation of the error and a list of steps to resolve it. The steps include logging into SAP S/4 HANA Cloud System, navigating to the SAP Fiori Launchpad, searching for the 'Manage Cost Center: Master Data' app, and performing specific actions within the 'Cost Center' field and 'Time-dependent' tab. The pop-up also includes a note about user authorizations and a 'Send Resolution via Email' button. The background interface shows various filters and a table of messages.

Accenture Agentic AI Framework – Standard AI

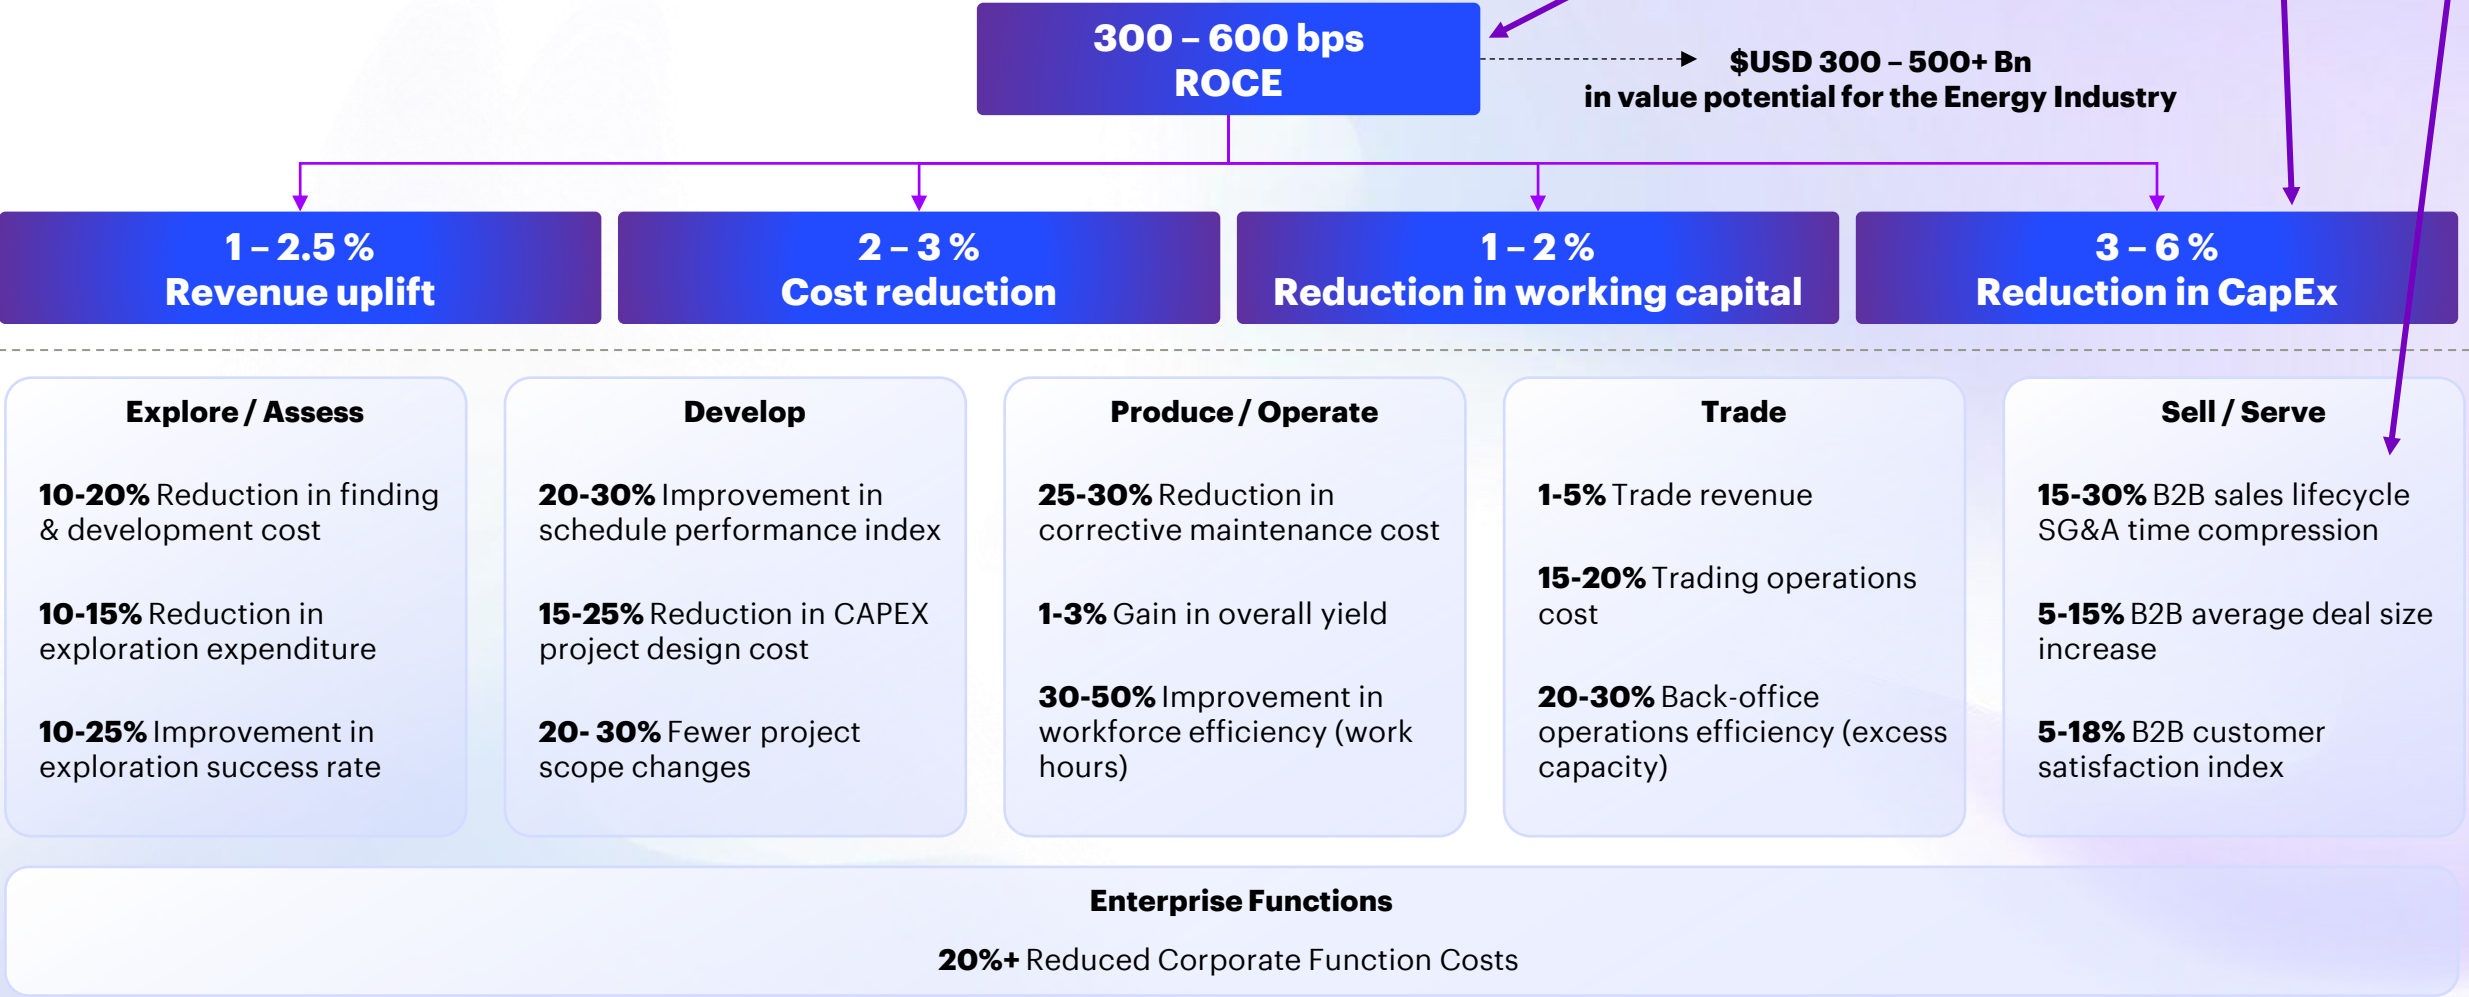

What pre-requisites would be required; technology components needed; licensing / cost considerations; functional and data dependencies; etc

> **Mandatory**

This **Agentic Revolution** promises significant bottom-line benefits across the energy value chain

What value drives / benefits would be gained by leveraging the AI capability; define top-level claim vs detailed inputs or drivers to achieve

Intelligent Collections Management (Joule) – SAP AI capabilities

Predictive Scenario for Risk of Late Payment

Conversational AI Interface: This predefined scenario enables users to predict the risk of late payment for individual invoices using the prediction engine. The scenario is managed through the Scenario Lifecycle Management.

Collection specialists can use this indicator in the following ways:

- Display the risk of late payment for invoices in the ‘**Process Invoices**’ app.
 - The value High indicates that there is a high risk that the invoice will not be paid on time.
 - If the value is blank, the following options are possible:
 - The risk of late payment for the invoice is not high.
 - The due date of the invoice is already overdue for more than 30 days.
- Prioritize invoices for the collection’s worklist using ‘**Manage Invoice Prioritization Rules**’ app.
 - Maximum Valuation: Define the maximum valuation an invoice can get in this prioritization.
 - Automatic Valuation: To automatically calculate the Maximum Valuation as the sum of the valuation points of all basic rules.
 - Priority Thresholds: Define the percentage-thresholds of the maximum valuation that leads to the classification of an invoice as low, medium, or high priority.

Include the risk of late payment in the collection strategy.

[Intelligent Collections Management | SAP Help Portal](#)

Provide details on the feature and related variations for the use-cases that are covered by the AI feature; Consider potential variants that might be important to consider, not covered, or not clear so would need to have test cases defined to ensure the use-case works as intended

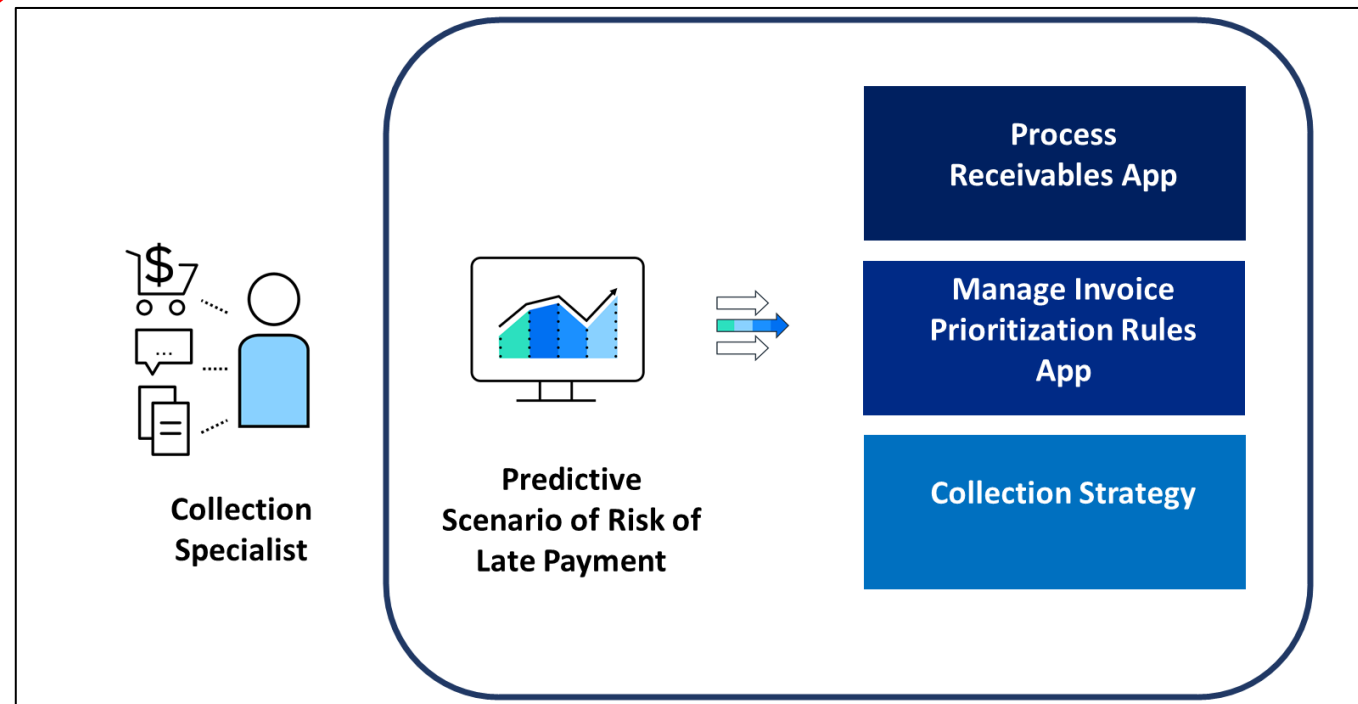

Capability	Summary Description
Predictive	Forecasts payment behavior, prioritizes action by risk.
Task Automation	Automates admin tasks to reduce manual work.
AI Insights	Delivers quick reports and recommendations via natural queries.
Integration	Works within SAP S/4HANA using business context.
Collaboration	Coordinates multiple AI agents for end-to-end workflows.

Intelligent Collections Management with Machine Learning

Advantages:

- Predictive Scenario of Risk of Late Payment forecasts invoice payment risks.
- Machine learning updates risk indicators daily for collection prioritization.
- Intelligent Scenarios Management apps enable predictive scenarios.
- Automated workflows improve collections efficiency and decision-making.
- The risk of late payment is assessed based on machine learning scenarios.

Other Features related to Accounts Receivable – Available Today

SAP Provides multiple features in the Accounts Receivable Space

- Review each feature to understand where they could impact the processes.
- Base features are the highest probability for usage or inclusion within the identified business process
- Premium features typically involve additional costs and may require a higher threshold to confirm value proposition (high cost to use <-> higher expectations for potential value proposition)

Name / Business Capability	Description	Commercial Type	DC/RE URL
Dispute Resolution Agent	Automates the process of resolving disputes about incorrect invoices.	Base	https://discovery-center.cloud.sap/ai-feature/bbf06e89-a47a-4a80-a619-97fa7ba6af92/
